Reference: Appraisal Report Vacant Office Building 2130 Eubank Boulevard NE Albuquerque, New Mexico

We have completed an appraisal of the above referenced property and we are pleased to submit the accompanying self contained report of our findings and conclusions. The objective of the appraisal was to estimate the market value of the fee simple interest in the property, subject to assumptions and limiting conditions stated in the report. Our analysis indicates the following value of the property.

| Effective Date         | September 13, 2013 |
|------------------------|--------------------|
| Estimated Market Value | \$1,710,000        |

The main body of our report provides you with our method of study as well as the limitations placed on the work product by the undersigned. Please read these limitations carefully so you may understand our conclusions clearly. In preparing this study, our conduct has been governed by the Code of Ethics of the various professional organizations of which we are members.

This opportunity to provide appraisal services to your organization is appreciated, and questions from authorized users of the report will be welcomed if any aspect of the research or analysis requires clarification.

# **Overview of the Subject Property**

The appraised property is the former Charter Bank building at 2130 Eubank Boulevard NE in Albuquerque, New Mexico. The property has one building with a gross area of 22,815 square feet and a land area of 2.50 acres, for a floor area ratio of 21.0%. The building has a multi-purpose office floor plan with areas designed for retail banking, loan officers and back office support. The property was originally developed as a 12,526-square-foot restaurant in approximately 1980. It was subsequently acquired by Charter Companies and converted to office space in 1989, including an 8,806-square-foot addition that increased the total area to 21,332 square feet. Charter performed a 1,483-square-foot addition in 2006, which added a retail banking area and a two-lane drive-up facility. The FDIC closed Charter Bank in January 2010 and the subject property was vacated in July 2010. It was listed for sale in 2010 at a starting price of \$3,100,000 and later reduced to the current list price of \$2,500,000. The property is under contract to be purchased for \$1,653,000 (\$72.45 per square foot).

Exhibits are included in the Appendix of this report to show the specific location and physical information.

### Client and Intended Use of the Appraisal

The client of this appraisal is the University of New Mexico. The intended use of the appraisal is to analyze a potential acquisition by the University of New Mexico, or a related entity. The intended users are UNM and the New Mexico governmental agencies that may review the appraisal as part of the acquisition process.

### Effective Date of Appraisal and Date of Report

The effective date of this appraisal is September 13, 2013, which is the date of the most recent site inspection. The date of the report is shown on the transmittal letter.

### Scope of the Appraisal

The assignment is to prepare a market value appraisal of the property identified above, and to deliver a narrative report of our findings and conclusions. This appraisal is transmitted in a self-contained report using the three conventional approaches to value

The scope of study encompassed property inspection, research of deed records, analysis of supply and demand, and analysis of market trends. This appraisal is intended to be in compliance with the Appraisal Foundation's Uniform Standards of Professional Appraisal Practice and the Appraisal Institute's Standards of Professional Practice.

I have investigated the general economy of the Albuquerque area, as well as the subject market sector. The sources of data used in this report include:

- Interviews with knowledgeable brokers and developers.
- A thorough search of in-house data held by Joshua Cannon & Associates, Inc.
- A search of the county clerk's records for recent property sales.
- A search of the available multiple listing services for sale and lease data, including SWMLS, CARNM, CoStar and Loopnet.

There is adequate information to support a reliable estimate of value. Joshua Cannon or other parties deemed reliable have personally verified the comparables relied upon in the Valuation Section.

### **History of Ownership**

Charter Southwest Commercial, Inc., or a related entity has owned the subject property since the late 1980s. The property was previously listed for sale by John Henderson with NAI Maestas & Ward for \$2,500,000 through the first half of 2012. It was placed under contract to be purchased by the University of

New Mexico on August 31, 2013. This contract contains the normal contingencies and the price is \$1,653,000. The contract was amended in June 2013 to extend the closing date to October 31, 2013.

### **Property Rights Defined**

The property rights appraised are the fee simple interest. Fee simple estate is defined as absolute ownership unencumbered by any other interest or estate, subject only to the limitations imposed by the governmental powers of taxation, eminent domain, police power, and escheat.

Source: Dictionary of Real Estate Appraisal, Fourth Edition, Appraisal Institute, Chicago, 2002

#### Legal Identification

The subject legal description is Lot 1-A, Block 129, Snow Heights Addition to the City of Albuquerque, as the same is shown and designated on the plat filed in the office of the County Clerk of Bernalillo County, New Mexico on April 13, 1972, Volume B6, Page 119.

### **Market Value Defined**

Market value means the most probable price which a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently, and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from seller to buyer under conditions whereby:

- (1) Buyer and seller are typically motivated;
- (2) Both parties are well informed or well advised, and both acting in what they consider their own best interest;
- (3) A reasonable time is allowed for exposure in the open market;
- (4) Payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto; and
- (5) The price represents the normal consideration for the property sold unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.
- Source: Department of the Treasury, Office of the Comptroller of the Currency, 12 CFR Part 34 [Docket No. 90-16], Real Estate Appraisals, published in the Federal Register, Vol. 55 No. 165, August 24, 1990: Final Rule.

#### Additional Appraisal Information

The subject building contains equipment that was used by the prior banking operation, including a back-up generator mounted northeast of the building, an automatic generator switch mounted in the electrical room, an air conditioning system and battery back-up system mounted in the data center room, bank teller stations, and the vault door. The client has instructed that only the back-up generator and switch are to remain with the real estate. The other equipment may be removed by the seller. The generator is affixed to a pad and hard-wired into the transfer switch inside the building, and these are included as part of the real estate in this appraisal.

# **General Underlying Assumptions**

- 1. The legal description used in this report is assumed to be correct.
- 2. No survey of the property has been made by the appraiser; no responsibility is assumed in connection with such matters. Sketches in this report are included only to assist the reader in visualizing the property.

- 3. No responsibility is assumed for matters of a legal nature affecting title to the property nor is an opinion of title rendered. The title is assumed to be good and merchantable.
- 4. Information furnished by others is assumed to be true, correct, and reliable. A reasonable effort has been made to verify such information; however, no responsibility for its accuracy is assumed by the appraiser.
- 5. All mortgages, liens, encumbrances, leases, and servitudes have been disregarded unless so specified within the report. The property is appraised as though under responsible ownership and competent management.
- 6. It is assumed that there are no hidden or unapparent conditions of the property, such as subsoil structures or asbestos containing building materials which would render it more or less valuable. No responsibility is assumed for such conditions or for engineering which may be required to discover such factors.
- 7. The appraiser has noted in the appraisal report any adverse conditions (such as needed repairs, depreciation, the presence of hazardous wastes, toxic substances, etc.) observed during the inspection of the subject property or that he became aware of during the normal research involved in performing the appraisal. Unless otherwise stated in the appraisal report, the appraiser has no knowledge of any hidden or unapparent conditions of the property or adverse environmental conditions (including the presence of hazardous wastes, toxic substances, etc.) that would make the property more or less valuable, and has assumed that there are no such conditions and makes no guarantees or warranties, express or implied, regarding the condition of the property. The appraiser will not be responsible for any such conditions that do exist or for any engineering or testing that might be required to discover whether such conditions exist. Because the appraiser is not an expert in the field of environmental hazards, the appraisal report must not be considered as an environmental assessment of the property.
- 8. It is assumed that all applicable federal, state and local environmental regulations and laws have been complied with unless otherwise stated, defined and considered in the appraisal report.
- 9. It is assumed that all applicable zoning and use regulations and restrictions have been complied with, unless a non-conformity has been stated, defined and considered in the appraisal report.
- 10. It is assumed the utilization of the land and improvements is within the boundaries or property lines of the property described and there is no encroachment or trespass unless noted within the report.
- 11. The Americans with Disabilities Act ("ADA") became effective January 26, 1992. The appraiser has not made a specific compliance survey and analysis of this property to determine whether or not it is in conformity with the various detailed requirements of the ADA.

# **General Limiting Conditions**

- 1. The appraiser will not be required to give testimony or appear in court because of having made this appraisal, or with reference to the property in question, unless arrangements have been previously made.
- 2. Possession of this report, or a copy thereof, does not carry with it the right of publication. It may not be used for any purpose by any person other than the party to whom it is addressed without the written consent of the appraiser and in any event only with proper written qualification and only in its entirety.
- 3. The distribution of the total valuation in this report between land and improvements applies only under the reported highest and best use of the property. The allocations of value for land and improvements must not be used in conjunction with any other appraisal and becomes invalid if so used.
- 4. Neither all nor any part of the contents of this report, or copy thereof, shall be conveyed to the public through advertising, public relations, news, sales or another media without written consent and approval of the appraiser, nor shall the appraiser, firm or professional organization of which the appraiser is a member be identified in public media without written consent of the appraiser.

5. The appraiser is not aware of any cross easements or any covenants, conditions, or restrictions impacting the subject property. It is assumed the property has adequate ingress and egress, and a sale of the property would not be inhibited by any covenants, conditions, or restrictions.

# Albuquerque Metropolitan Area Description

This section of the report summarizes the city's economic base, its demographic and land-use trends, and the current development climate for real estate. The appraised property is within the Northeast Heights market area of Albuquerque, New Mexico.

## Geographic Area

The Albuquerque metropolitan area is located near the geographic center of New Mexico, situated on a high plateau along the Rio Grande just west of the Sandia and Manzano Mountains. The city covers 188 square miles and serves as the state's commercial, industrial, and transportation center. According to the U.S. Census Bureau, the state's 2010 population was 2,059,179, and the Albuquerque metropolitan area population was 887,077. The Albuquerque Metropolitan Statistical Area includes Bernalillo County, the city of Albuquerque, the city of Rio Rancho as well as Sandoval, Valencia and Torrance Counties. Santa Fe, the state capital, is 65 miles to the north. The state capital, with a 2010 metropolitan-area population of 144,170, is a much smaller city than is Albuquerque.

Albuquerque is relatively isolated, with no significant sub-regional commerce centers between itself and Phoenix, 450 miles to the west; Denver, 420 miles to the north; Dallas, 650 miles to the east; and El Paso, 300 miles to the south. Albuquerque is well served by interstate highways and major airlines.

## Historic Development Pattern

The Albuquerque metropolitan area is geographically divided into three distinct areas: the East Mesa, the Valley, and the West Mesa. Initial European settlement occurred in the valley area, where Spanish colonists settled the flood plain of the Rio Grande in the vicinity of "Old Town" in the 1600s. This agrarian society spread north and south along the river in a pattern of farms and small villages. Due to this settlement pattern, the most traditional segments of regional development are found in the valley areas.

Downtown Albuquerque originated in the late 1800s, when the railroad placed its tracks about one and onehalf miles east of the Old Town Plaza. The Railroad Subdivision was platted near the tracks, and businesses developed in response to the convenience of moving goods and people by rail. For approximately 70 years, from the arrival of the railroad to the development of the first suburban shopping mall in 1961, Downtown Albuquerque was the center of government and commerce for the growing area. In subsequent years, Downtown workers and residents followed the national trend of out-migration to the suburbs (1960s and 1970s).

The decline of the Central Business District in the 1970s prompted government support of Downtown redevelopment through periodic tax incentives and municipal bond financing of private projects. By the late 1980s and early 1990s, the Central Business District was the location of some of the heaviest public and private capital investment in the metropolitan area. The Downtown area is the city's second largest office district and public officials continue to work to attract retail and entertainment businesses.

Residential and institutional growth took place largely on the East Mesa during the period 1930 to 1960. The direction of growth extended east from Downtown along old US Route 66, which was the east-west intra-city and interstate roadway until the freeways were developed in the 1960s. The establishment of the University of New Mexico, the state fair grounds, Albuquerque International Airport, Kirtland Air Force Base, Sandia National Laboratories (scientific and weapons research), and four regional hospitals on the East Side propelled this growth and created the economic base of modern Albuquerque as well. This early growth area is generally identified as the Southeast Heights and University area, and contains several high-demand residential neighborhoods.

Beginning in the early 1960s, development continued on the East Mesa, but shifted north of I-40 and east of I-25 to what is now known as the Northeast Heights. The boom in population growth and housing during the 1960s–1990s made the "Heights" the largest and most prosperous regional development area. This area was laid out on a grid system with primary arterials placed along the section lines in accordance with the

government-survey system. Until more recent planning and development, strip commercial and multifamily land uses were placed along the major arterials, forming a buffer for the single-family residential neighborhoods within the square-mile sections. Beginning in the 1980s, curved streets and clustered nonresidential uses became the typical style of development. The easternmost area of the Northeast Heights has a preferred location at the base of the Sandia Mountains and should remain in high demand for residential buyers for the foreseeable future. The foothills area contains much of the region's most expensive housing.

The city's second major urban center, called "Uptown," was created near I-40 and Louisiana Boulevard at the approximate center of East Side development. Initiated in the 1960s when two regional shopping centers were developed within a quarter mile of each other, Uptown was Albuquerque's fastest-growing commercial and financial center during the 1970s and 1980s. It continues to be a major retail and office district.

The supply of land on the East Mesa is effectively absorbed and the primary development emphasis is now in the "West Mesa," or the western portion of the metro area, which includes the submarkets of Southwest Mesa, Northwest Mesa and Rio Rancho. Initially, the West Mesa competed primarily on the basis of less expensive land and suffered due to poor transportation linkages and inferior services. These impediments have been overcome; however, the major employment centers are primarily east of the Rio Grande and commuter traffic congestion is a material problem. The 12,612-acre Mesa del Sol master plan located on I-25 at the south end of Albuquerque is now developing and the first homes came on-line in 2012. This project has already attracted some major employers and it will eventually capture a significant percentage of new housing permits.

# Population Trends

The 2010 population for Albuquerque was 545,852, according to the U.S. Census. The city's population grew at 7.59% per year during the 1950s, and the growth rate has typically averaged near two percent per year from the 1960s through the present.

Population growth 1950 to 2010 in the city of Albuquerque and Bernalillo County is shown in the following chart.

|      | City of A     | lbuquerque   | Bernalillo County |              |  |
|------|---------------|--------------|-------------------|--------------|--|
| Year | Total Persons | Growth Rate* | Total Persons     | Growth Rate? |  |
| 1950 | 96,815        |              | 145,637           |              |  |
| 1960 | 201,189       | 7.59%        | 262,199           | 6.05%        |  |
| 1970 | 244,501       | 1.97%        | 315,774           | 1.88%        |  |
| 1980 | 332,336       | 3.12%        | 420,262           | 2.90%        |  |
| 1990 | 386,988       | 1.53%        | 480,577           | 1.35%        |  |
| 2000 | 448,607       | 1.49%        | 556,678           | 1.48%        |  |
| 2010 | 545,852       | 1.98%        | 662,564           | 1.76%        |  |

# US Bureau of the Census Population Figures: 1950 - 2010

\*Annual compound rate of growth.

Note: Bernalillo County data encompasses the same land area from year to year. The City of Albuquerque's land area has undergone changes due to annexation.

## Employment

Albuquerque's economic base is nearly three-fourths trade, services, and government. Federal spending is a significant factor in the local economy, given the influence of Kirtland Air Force Base and Sandia National Laboratories, a major federal contractor in research and development of energy, weapons, and space exploration.

Since 1994, the average annual job growth has fluctuated from -3.9% to over 4% in the metropolitan area. Employment increases have been mainly in transportation, warehousing & utilities, retail trade, information, education & health services, government, and leisure & hospitality. Manufacturing experienced a decline due to the layoffs at Intel, and construction has had significant job losses since 2007.

The following table shows growth in the number of persons employed in the Albuquerque Metropolitan Statistical Area (MSA), the state of New Mexico, and the United States since 1994. The Albuquerque MSA includes Bernalillo, Sandoval, Valencia and Torrance Counties. (Note that starting in 2004 annual averages for labor force and number employed reflect a new DOL methodology in which workers are counted in the county of residence instead of job location. This may have overstated the growth in employed persons in the MSA for 2004.)

### Employment According to Categories: Albuquerque MSA (Nonagricultural)

Source: New Mexico Department of Workforce Solutions

Joshua Cannon & Associates, Inc.

The Albuquerque MSA is much more of a service economy than a manufacturing economy. Roughly 87% of the economy is attributable to the service sector. Government of all types, at 22%, constitutes the single largest category of jobs.

As described above, the University of New Mexico Bureau of Business and Economic Research (UNM BBER) is regarded as the leading research and forecasting entity in New Mexico for population and economic data, and they published a quarterly forecast of economic statistics, including employment. The most recent forecast from July 2013 is shown on the following page.

The Albuquerque MSA had negative employment growth in 2008–2012, and UNM BBER forecasts a return to positive levels in 2013–2018. As with the United States economy, the pace of recovery is forecast to be moderate.

Following are some bullet points from the most recent Summer 2013 UNM BBER forecast.

- Leading employment growth were the leisure and hospitality sectors. The strongest performer in the MSA in terms of job addition was the accommodation and food services sector, which added 1,181 jobs year-over-year in the quarter (3.5%). This has been one of the strongest performing sectors on the MSA economy as it has experienced its ninth consecutive quarter of positive growth. In addition, the arts, entertainment & recreation sector added 491 jobs (13.9%), for that sector's fourth consecutive quarter of double-digit year-over-year growth and its sixth consecutive quarter of positive growth.
- The construction sector added 155 jobs in the quarter (0.8%). This marks the first quarter since 2006Q4 that the construction sector experienced positive net job addition. Employment in that sector only reached 19,109 workers, or just 61% of the 2006Q4 level of 31,153. Despite the relatively low employment levels, the positive outlook appears to be consistent with other, related construction indicators. For instance, permits for housing (total permits) in the city of Albuquerque have increased strongly in each quarter of 2012 and in six of the last seven quarters. Although absolute permits levels are still relatively low (compared to historical standards), the increased activity is perhaps suggestive of increasing momentum in the building industry. In addition, total construction award data published by FW Dodge, indicates positive year-over-year growth in the final three quarters of 2012 (by 11.2% in 2012Q2, 46.3% in 2012Q4 and 47.9% in 2012Q4). Although the awards are coming off of historically low absolute levels, their growth is suggestive of recovery. In addition, data for 2013Q1 shows continued strength, growing by 31.2%.
- The information sector, which includes publishing, motion picture & sound, broadcasting, telecom, data processing & housing and other information industries added 655 jobs in the quarter (8.4%). This is the second consecutive quarter of positive growth in this sector, after two consecutive years of declines. Wholesale trade continued its recent winning streak, adding 304 jobs (2.7%) as did real estate, rental & leasing, which added 239 jobs (4.7%) for each sectors fourth consecutive quarter of positive growth.
- Labor force and unemployment data (reported by NMDWS), which are both current through 2013Q2 suggest some improvement in recent quarters. In the case of the non-seasonally adjusted labor force, the Albuquerque MSA grew by 0.9% in 2013Q2, for the MSA's third consecutive quarter of positive growth. That positive growth comes on the heels of 15 consecutive quarters of declines.
- With employment data for calendar year 2012 now in the books, total employment growth fell by 0.6% for the year, with private employment declining by 0.3%. In both cases, the declines mark the fifth consecutive calendar year of negative employment growth in the MSA. In terms of employment levels, the Albuquerque MSA has lost 26,854 total employment jobs since the 2007 peak and 29,249 private employment jobs. Note that the government sector actually added jobs over the period because it only began losing jobs in 2011.
- In the near-term (calendar year 2013), FOR-UNM expects that the Albuquerque MSA will experience a fairly sharp increase in the reported job numbers. For 2013, FOR-UNM forecasts that total employment will grow by 1.0% in the first quarter of the year and 1.4-1.5% in each of the remaining quarters. As such, the economy is forecasted to add 4,806 jobs for the year (1.4% annual growth), with the private sector adding 5,022 jobs (1.8%).
- In the longer-term (for the six year period beginning in end-2012 until 2018), the Albuquerque MSA economy is forecasted to perform moderately well and add a total of nearly 34,000 jobs in total (for 1.6% average annual growth). As a result, the economy is expected to reach pre-recessionary employment levels by late-2016 or early-2017. The overwhelming majority of the gains are expected to be in the private sector, which is forecasted to add an average of 5,493 jobs per year (2.0% average annual growth). The government sector is expected to add only 173 jobs per year on average, with average losses per year in the federal government sector (-308 jobs) nearly wiping out gains seen in the

local government sector (327 jobs). Meanwhile, the state government sector is expected to add an average of 155 jobs per year.

- With regard to the private sector, the healthcare & social assistance sector is expected to add the greatest number of jobs (1,501 jobs per year on average) especially as healthcare reform really begins to kick in. In addition, the construction sector is forecasted to add a significant number of jobs (736 jobs per year), as that sector returns as one of the major drivers of economic growth in the MSA. Not to be outdone is the administrative & waste services sector, which is forecasted to add 716 jobs per year as employers turn to temporary workers to fill short-term gaps, and perhaps to avoid or limit the payment of benefits to workers.
- Permits for housing are expected to accelerate after 2013 to 2,125 units in 2014, 2,503 units in 2015, 2,634 units in 2016, 2,662 units in 2017 and 2,760 units in 2018. It is important to note, however, that despite the improved conditions, the number of units expected to be permitted in 2018 are only 48% of the annual peak reached in 2003 (5,761).

## Real Estate Markets

The following table summarizes vacancy by market sector from year-end 1986 to 2012. Commercial real estate in Albuquerque recently experienced sharp increases in vacancy in all sectors. This is due to the recession, including a very slow housing market and a decline in retail spending. The rise in retail vacancy is primarily due to large store closings, and the industrial vacancy is also heavily impacted by retailers, as well as building materials. Most market participants believe vacancies have stabilized.

| Year | Retail Market | Office Market | Industrial Market | Apartment Market |
|------|---------------|---------------|-------------------|------------------|
| 1986 | 7.8%          | 20.9%         | 8.3%              | 13.2%            |

# City of Albuquerque Construction Permits: 1976-2012

91 92 93 94 95

(No. Of Units)

nily

96 97 02 03 11 12

Multifamily (No. of Units)

1,000

 (Bernalillo, Sandoval & Valencia Counties) totaled 8,818 in 2005. New single-family permits for the metro area declined to 1,192 in 2011 before rising slightly in 2012. This moderate rate of growth is expected to continue.

For apartment construction, the city's previous cycle peaked in 1994 and 1995 with approximately 1,800 apartment units permitted in each of those years. Most of that new construction was upper-end projects and was split almost evenly between the Far Northeast Heights and the West Side. From 1996–2011, much of the new multifamily development was either condominiums or affordable apartments financed with Low Income Housing Tax Credits. Non-subsidized multifamily permits had a rebound in 2012 with 741 units.

Retail market conditions are slowly improving and some new construction is occurring. Most of the big box stores vacated during the recession have been absorbed and new retailers coming into the market will generate new construction. Office market conditions remain depressed due to continued job losses and shrinking space needs per office employee. Market experts are uncertain on when conditions in this sector will improve. Industrial market conditions are soft, but stable, and their improvement going forward will track the economy.

Conclusions regarding the real estate markets are that: 1) single-family residential construction was exceptionally strong from 2001 through 2005, then declined into 2011 by significant amounts; 2) apartment construction has had an erratic building pattern for several years and an upturn is beginning to occur; 3) commercial construction was strong in 2005–2008, and then plummeted in 2009–2011.

# Summary

Like the national economy, the metro area is currently suffering from a soft economy and job growth was negative in 2008–2011. Metro area job growth in 2012 was slightly positive. The Albuquerque metro area averaged employment growth of approximately two percent per year through 2007, but the long-term projection is below that level.

The primary growth areas of the metro area will be to the west. Growth will also move south with the ongoing development of Mesa del Sol and the continued development in Los Lunas. The northeast quadrant has a nominal remaining land supply, but is expected to remain a desirable residential and commercial area of the city due to the quality of existing infrastructure and improvements, as well as its proximity to employment centers and the Sandia Mountains.

# **Neighborhood Description**

The subject's larger neighborhood is Albuquerque's Northeast Heights, the city's most populous area, containing several square miles of mostly middle- to upper-middle income households. For multiple decades ending in the1980s, the Northeast Heights was the primary growth area for residential development for the Albuquerque metro area. Northeast Albuquerque has natural barriers on the east (Sandia Mountains) and north (Sandia Indian Reservation) and development has reached those boundaries. As land became limited, growth shifted to western Albuquerque and away from the northeast. Now the Northeast Heights is a mature suburban area with limited growth at infill sites.

The subject is located on Eubank Boulevard, about 500 feet south of Menaul Boulevard. This is in the central portion of the Northeast Heights, which is a mature residential area with commercial and institutional uses along the arterials. Interstate 40 is 1.75 miles to the south. The Uptown commercial district—which includes two regional malls as well as hotels and numerous mid-rise office buildings—is two miles west of the subject.

Eubank Boulevard is classified as an arterial street at the subject frontage with a span of approximately eight miles. Its southern terminus is at the entry gate into Sandia National Labs and Kirtland Air Force Base, and it is a primary commuter route for these major employers. Eubank Boulevard frontage is developed with a range of commercial improvements, including fast food and full service restaurants, strip and freestanding retail, automotive service, and offices. Building quality and occupancy rates along Eubank are consistent with the metro area average. Single-family residential is the predominant development away from the

arterial frontages. Homes are typically 30+ years old, generally well maintained, and the marketability of the area is considered average.

Eubank Boulevard frontage at the subject had a 2010 average weekday traffic count of 31,200 vehicles. Traffic counts at this point have declined over the last several years, from 41,500 vehicles in 2003, and 36,800 vehicles in 2007. The reason for the decline is unclear, although counting methods have changed over the years and this could be a primary factor.

In conclusion, the subject is in a mature suburban neighborhood on a primary commercial arterial. There is a minimal amount of vacant land in the area that could support commercial development. The neighborhood is estimated to be in a period of stability.

# Site Description

| Size:          | 2.50 acres or 108,900 square feet.   |
|----------------|--|
| Shape:         | Rectangular with dimensions of 237.56 feet wide by 458.45 feet deep.   |
| Topography:    | Level and at street grade.   |
| Flood Zone:    | According to the most recently prepared National Flood Insurance Program flood hazard map (Community Panel Number 35001C0356G, dated September 26, 2008), the subject site is located in Zone X, which is an area determined to be outside the 500-year flood plain. |
| Utilities:     | All typical utilities are available, including water, sewer, natural gas, electricity, and telephone.  |
| Drainage:      | Drainage is routed into storm drain infrastructure in Eubank Boulevard.  |
| Soil Condition | s: No soil or engineering reports are available and adequate conditions are assumed.   |
| Environmental: | The site is assumed to be free of contamination from hazardous substances.   |
| Access:        | The subject is a midblock site and access is from two entrances from Eubank Boulevard. A median break with a left-turn bay is aligned with the southern subject entrance.  |
| Easements:     | The recorded plat of the subject tract does not show any on-site easements. Typical utility easements are assumed at the site perimeter.   |

# **Property Tax Information**

Real estate taxes in New Mexico are based on taxable values of 33.3% of assessed values for both nonresidential and residential properties. The state operates on a base-year concept that advances every two years. The mill levy, established in September at the state capital, is released in early October of each year. Property taxes are paid in two installments due in November and the following May. The code number for the subject is 1-021-059-028-198-3-20-50. The assessed values are \$762,300 for the land and \$1,062,800 for the improvements, for a total of \$1,825,100. Annual taxes are \$28,469.94, or \$1.25 per square foot of building area.

# Zoning

The subject site is under the jurisdiction of the City of Albuquerque and is zoned C-2, Community Commercial Zone. The C-2 zone provides suitable sites for commercial activities, and certain specified outside storage. Permissive uses include clinics, offices, restaurants, radio or television stations, and retail and service activities provided they are not listed as a conditional use in this zone. This is a liberal commercial zoning allowing virtually all typical suburban commercial land uses. The subject improvements are a conforming use within the C-2 zoning classification.

# **Improvements** Description

The subject is predominantly a one-story office building, plus one front corner is improved as a retail bank with two drive-up lanes. A second-story office area at the rear corner contains 1,931 square feet, or 8.5% of the building area. This property description is based upon the appraiser's inspection and architectural plans that were obtained from the property owner.

According to the property owner, the original building was constructed as a restaurant in approximately 1980. Charter Companies acquired the property, and they converted the entire property to an office building in 1989, including an 8,806-square-foot addition. Charter expanded the building again in 2006 to add a retail banking area and the drive-up lanes. The FDIC closed Charter Bank in January 2010 and the subject property has been vacant since July 2010.

Below is a summary of building dates and gross building areas. These areas have been calculated from the architectural plans and crosschecked with current measurements. Copies of the architectural plans are in the *Appendix*.

| Description                             | 1st Floor<br>Square Feet | 2nd Floor<br>Square Feet | Total<br>Square Feet | Percent |

## Subject Building Areas

The subject building has a generally rectangular shape and is set well back from Eubank Boulevard. The building has attractive commercial construction with frame/stucco exterior walls and a glass storefront entrance.

General building specifications are as follows. Photographs are included in the *Appendix* that show the subject construction and finishes.

| Foundation:        | Concrete slab foundation with concrete footings at ground level. The second floor office is wood deck on wood joists.   |
|--------------------|---|
| Exterior Walls:    | The exterior walls are synthetic stucco on sheathing on 6-inch wood studs. The building was re-stuccoed in 2006.  |
| Roof:              | Wood roof trusses covered with wood decking and a flat membrane roof system. The roof was replaced in 2006. Roof height varies throughout the building from approximately 10–20 feet. The typical roof height is approximately 14 feet.   |
| Floor Coverings:   | Commercial-grade carpeting in most office areas. Ceramic tile in restrooms and front lobby. Rear work area is vinyl tile. The carpet was installed in 2003 and in average to fair condition.  |
| Interior Walls:    | Painted and textured gypsum wallboard throughout the building.  |
| Ceilings/Lighting: | Suspended 2' x 4' acoustical ceiling tiles at 8-foot-high, which is typical for partitioned offices. Other heights are 12 feet at the front lobby & bank area and 10 feet at the central open office. The rear workrooms and restrooms have 8-foot drywall ceilings. Recessed fluorescent light fixtures are typical in the building. |
| Insulation:        | Fiberglass batt insulation in exterior walls and ceilings. See architectural plans in the <i>Appendix</i> for details.  |
| Windows & Doors:   | Front elevation has good quality storefront system with insulated glass in aluminum framing. Other windows are average quality and of mixed type.   |

| Doors:              | Glass storefront entry doors at the lobby, French doors to an interior patio off of<br>the kitchen and conference room. Steel doors at rear, predominantly solid core<br>wood doors at the interior.   |
|---------------------|--|
| Restrooms/Plumbing: | One set of main restrooms of the central work area that have six fixtures each.<br>There are six other two-fixture restrooms located throughout the building. The<br>main restrooms have ceramic tile flooring and walls. The small restrooms have<br>varying finishes.  |
| Heating/Cooling:    | roof mounted package units provide HVAC. The property owner reports the units range between approximately 10–20 years of age and are in working order.   |
| Electrical:         | The building has above-average electrical capacity to serve the office and data center equipment.  |
| Data Lines:         | The property owner reports the building is served by a T-1 line and fiber optic line.  |
| Fire Suppression:   | The building is 100% served by a wet pipe fire sprinkler system.   |
| Elevator:           | The subject does not have a passenger elevator to the second floor. It does a have a dumbwaiter, which was used by Charter for documents.  |
| Stairs:             | One interior stairway.   |
| Vault:              | The 2006 addition included a 10 x 15 foot walk-in vault with fortified walls and ceiling, and a steel vault door.  |
| Drive-UpCanopy:     | A two-lane drive-up canopy of $\pm 750$ square feet is attached to the northwest corner of the building. A glass teller window and a pneumatic tube serve it. This canopy was added in 2006.   |
| Equipment:          | The subject building contains equipment that was used by the prior banking<br>operation, including a back-up generator mounted northeast of the building, an<br>automatic generator switch mounted in the electrical room, an air conditioning<br>system and battery back-up system mounted in the data center room, bank teller<br>stations, and the vault door. The client has instructed that only the back-up<br>generator and switch are to remain with the real estate. The other equipment may<br>be removed by the seller. The generator is affixed to a pad and hard-wired into the<br>transfer switch inside the building, and these are included as part of the real estate<br>in this appraisal. |
|                     | The subject generator was installed in 2007 and is a 364 HP diesel engine (Model #QSL9-G2 and 125 KW generator (Model # 125DSHAE).   |

# Site Improvements

Site improvements consist of an asphalt-paved parking lot with  $\pm 145$  spaces, exterior lighting, adequate concrete walkways and curbing, and good quality landscaping of trees and shrubs. The parking volume is 6.36 spaces per 1,000 square feet of gross building area. The local norm is approximately 4.0 spaces per 1,000 SF, and the subject has adequate parking to support nearly all potential office uses.

# Quality, Design & Condition

The subject's overall quality is considered average for the general office market based upon its architectural design and quality of finishes. The building exterior is attractive with a storefront and stucco installed in 2006. The front lobby and banking area also have finishes installed in 2006. The finishes in the balance of the building were installed in 1989 and the carpet was replaced in 2003. Most of this space is average in condition and some is rated fair. The second floor office space has lower quality finishes with some exposed fire sprinkler piping under an 8-foot ceiling height.

The layout is typical for an office building of this size with a mixture of partitioned and open areas. It is likely a buyer would reconfigure some of the partition walls to suit their business plan. The banking improvements at the subject property are estimated to have no contributory value to the most probable buyer. The subject property was put under contract by UNM in August 2012, but prior to that it had been listed for sale since mid-2010 and did not attract a banking buyer. The subject is a large building with a midblock location that is set back from Eubank Boulevard by approximately 230 feet. The building visibility is adequate for general office or retail/special purpose conversion, but below average for a branch bank.

## Overview of the Office Real Estate Market

Albuquerque has 14.1 million square feet of office space in single-tenant and multi-tenant buildings containing 10,000 square feet or more, including owner-occupied buildings. The distribution of space by market area is shown in the following chart, along with vacancy statistics from first quarter 2013, as published by Colliers International (formerly Grubb and Ellis New Mexico).

Office Market Statistics - First Quarter 2013

|                  |               | 1st Quarter | 2013    |         |       |       |       |        |          |        |       |       |       |

| Source: Colliers | International |             |         |         |       |       |       |        |          |        |       |       |       |

The metro area office vacancy is reported to be 21.2%, which is the highest vacancy rate in over 20 years. This is up from the recent low of 10.8% in 2007. The general increase in vacancy is attributed to a decline in economic conditions and an increase in metro area unemployment. The majority of the spike from fourth quarter 2012 to first quarter 2013 is due to PNM Resources vacating 250,000 square feet in Downtown. The subject property is in the Northeast Heights market area, which has a vacancy rate slightly below the citywide average at 19.6%. The Northeast Heights is a stable suburban market that is effectively fully built up, and its vacancy rate is not impacted by new supply.

#### Office Absorption Statistics

The preceding chart shows the metro area has an annual average of approximately 89,000 square feet of office absorption over the past 10.25 years for leased buildings in excess of 10,000 square feet. Absorption was negative in 2010–2013. Overall, office conditions show no real sign of improvement and market participants are generally uncertain about the change in conditions in the near term.

### **Highest and Best Use**

The four criteria of highest and best use are (1) legally permissible, (2) physically possible, (3) financially feasible, and (4) maximally productive. For appraisal purposes, highest and best use analysis is a two-step process, which first considers the site as if vacant and then the combination of land and existing improvements.

### Highest and Best Use – As Vacant

*Physically Possible* – The subject is level land fronting an arterial in the Northeast Heights, and all utilities are available. It is a midblock site without signalized access, but there is a median break on Eubank Boulevard at the subject entrance. The subject is not a candidate for development with the most intensive commercial uses that require signalized access.

*Legally Permissible* – The subject C-2 zoning permits a wide variety of office, retail, service and institutional uses. It is unlikely that zoning would prohibit a use that is otherwise feasible.

*Financially Feasible/Maximally Productive* – Issues influencing the demand for commercial space at the subject location are addressed in the preceding sections. Albuquerque is slowly coming out of a five-year period of negative job growth and the forecast is for moderate positive growth in the near term. Office market conditions in Albuquerque are poor with a 21.2% vacancy. Vacancy in the retail sector is about 8% and slowly improving. It is unlikely a new speculative development could be feasibly constructed and tenanted in the near term. However, the property has a good arterial location in a demographically solid area and the long-term prospects are good.

The highest and best use of the subject site, as vacant, is estimated to hold for future commercial development once economic conditions reach the feasibility threshold.

# Highest and Best Use - As Improved

The subject is an average quality office building in average condition and current market data indicate the improvements contribute value to the land. Demolishing the existing structure and redeveloping the site for a different use is not feasible. The value "as improved" exceeds the value "as if vacant." The highest and best use of the subject, as improved, is likely to be an office building. The subject is also a candidate to be converted to an alternative use that can use the existing office improvements. Some of these types of potential uses include retail showroom/office, health care, education, religious and government.

### **Problem Analysis and Data Interpretation**

The subject property is a 22,815-square-foot office building that is 100% vacant. The three conventional valuation methods are applied in the following valuation, including the Cost Approach, Sales Comparison Approach and Income Approach. The Reconciliation section, where a summary of important points of each method is presented in support of a final market value estimate, follows the valuation.

# **Cost Approach**

The Cost Approach is based on the premise that a buyer will not pay more for a property than it would cost to create an equally desirable substitute. Subsections of the Cost Approach are Land Value Estimate, Improvements Cost Estimate, Entrepreneurial Profit, Depreciation, and Cost Approach Conclusion.

#### Land Value Estimate

The market value of the subject land is estimated based on a sales comparison approach in which a comparison is made between the subject and other properties that have sold. This valuation method measures the actions of typically informed buyers and sellers through observation of prices paid in the market for properties that are reasonably similar in terms of probable use and development potential. Factors affecting value—including location, size, off-site development costs, time of sale, and financing terms—are considered. The unit of comparison used is price per square foot.

The subject neighborhood has been almost fully built up for many years and there have been no relevant recent land sales. Accordingly, the search area was expanded to include sales in other Albuquerque area locations that are generally similar to the subject. Four land sales considered relevant to this valuation are summarized on the following chart and individual data sheets are in the *Appendix*.

The land transactions occurred over a time span of May 2010 to December 2012. These dates are after the recession began and no adjustment for time is required. Also, no adjustments for property rights, favorable financing, or atypical conditions of sale are warranted.

| Data No.                  | Sale 1                               | Sale 2  | Sale 3                                      | Sale 4                                  |

#### Land Sales Summary Chart

The four sales provide a relatively narrow range of \$8.40-\$10.00 per square foot. Sale 1 at the bottom of the range is inferior in location. Sale 2 is rated most similar to the subject and indicates a value of \$9.29 per square foot. Sales 3 are 4 indicate subject land value below \$9.79 per square foot.

Based upon the preceding data and analysis, the market value for the subject land is estimated to be \$9.30 per square foot, or a rounded total of \$1,010,000.

#### Estimate of Subject Land Value

| Total Land Area in Acres               | 2.500       |
|--|-------------|
| Total Land Area in Square Feet         | 108,900     |
| Estimated Market Value per Square Foot | \$9.30      |
| Total                                  | \$1,012,770 |
| Rounded Estimate of Market Land Value  | \$1,010,000 |

### Improvements Cost Estimate

The source for estimating the subject improvements cost is the *Marshall Valuation Service*, a national cost service published by Marshall and Swift, Los Angeles. These cost estimates include labor, materials, supervision, contractor's profit and overhead, architect's plans and specifications, sales taxes, insurance, and interest on interim construction financing. The subject is Class D type construction, with an average-to-good quality rating. A portion of the subject contains banking improvements and these are estimated to have no contributory value. The banking improvements are not included in the replacement cost estimate.

#### Replacement Cost Estimate of Improvements - Marshall Valuation Service

# Entrepreneurial Profit

Entrepreneurial or developer's profit is typically associated with the risk a developer takes in bringing a speculative or build-to-suit property to market, in addition to compensation for negotiating leases and guiding the project from inception to stabilized occupancy. The Albuquerque office market is depressed and it is not feasible to develop new improvements on a speculative basis. A factor for entrepreneurial profit is not warranted.

# Depreciation

Accrued depreciation is a loss in value to the improvements from any cause. The sources of accrued depreciation are physical deterioration, functional obsolescence, and external or economic obsolescence. Physical deterioration is wear and tear usually caused by age and is either curable or incurable. Functional obsolescence is the adverse effect on value resulting from defects in design; external obsolescence results from negative influences to the property from outside the site.

Depreciation due to normal wear and tear (incurable deterioration) is based on an age/life method indexed to effective age. The building was constructed in phases between 1980 and 2006, and the weighted actual age is approximately 28 years. The building has received regular maintenance and the effective age is estimated to be 25 years. *Marshall Valuation Service* provides a schedule of typical useful lives by category of building and type of construction. A 50-year life is estimated as typical for this property type. Depreciation based on the effective age/life method is 50% (25/50), which is applied to total improvements cost.

The Cost Approach also can include applicable deductions for functional and/or economic obsolescence. The subject property is a larger office building in a market that is depressed at both the metro and submarket level. It clearly suffers from both functional and economic obsolescence; however, available market data is not sufficient to support specific estimates. The amount of obsolescence for this property is represented by the spread in value estimates between the cost approach and other approaches.

# Cost Approach Summary

The following summarizes the valuation estimate from the Cost Approach.

| <u>0031 Appi</u> |   |               |                      |  |

### Cost Approach Summary

## Sales Comparison Approach

This approach develops an indication of value by analysis of prices paid in actual transactions of similar properties. The subject is a larger office building designed for a single occupant and sales of this type are not common in the local market. The subject could be reconfigured into a multi-tenant building, although the feasibility of this conversion is questionable. The recession has caused a decrease in rents and occupancy rates, plus obtaining financing for investment buildings is difficult. This has depressed the value of multi-tenant office buildings. There is a greater volume of sales to owner-users and these typically occur at higher prices per square foot. Low interest rates have improved the economics of owning versus renting, and this works to increase the spread in values between owner-occupied and investment buildings. The subject is an attractive building with a high parking volume and would be marketable to a cross-section of buyers. However, it is not located in a first tier office market area, nor is it proximate to the city's upper-income residential neighborhoods. Its location probably excludes buyers that are willing to purchase office buildings at the highest price tiers. The subject market consists of those buyers seeking a larger average quality functional building in an affordable mid-tier location.

The sales search for this analysis focused on sales that are similar to the subject in the combined criteria of size, quality/condition, and location. This search produced nine sales and the majority are office buildings. The sales also include a church with an arterial location that had been retrofitted from a building similar to the subject, and an office/retail/warehouse building that is also similar to the subject in many characteristics.

Adjustments to the market data are applied to account for significant differences between the subject and the sale properties. The appropriate order of adjusting sales to the subject property is as follows:

- 1. Property Rights Conveyed
- 2. Financing Terms of Sale
- 3. Conditions of Sale
- 4. Date of Sale (Time)
- 5. Location & Physical Characteristics

All of the sales were arms length transactions and no adjustments are required for property rights, financing terms or conditions of sale.

*Date of Sale*. The date of sale is an important consideration given the recent trend in the economy and real estate cycle. The sales occurred between September 2009 and June 2013. The sales are all post recession and no adjustment for time is warranted.

*Location & Physical Characteristics.* There is substantial variation within the data set for location and physical characteristics. Specific adjustments are shown on the chart and based upon my sale confirmation interviews and physical inspections.

The sales are summarized on the following chart and individual data sheets for each sale are in the *Appendix*. The sales are ranked on the chart by their unadjusted sale price per square foot.

| Sale No.  | Subject  | Sale 1  | Sale 2   | Sale 3   | Sale 4  |

# Improved Sales Summary Chart

The unadjusted sale prices have a range of \$49.93-\$104.21 per square foot. After adjustment, the range narrows to \$70.56-\$80.94 per square foot. The sales are ranked by adjusted price on the following chart.

| Sale        | Address               | Buyer<br>Use                  | Adjusted<br>Sale Price<br>per Square Foot |  |

#### Improved Sales Ranked by Adjusted Sale Price per Square Foot

#### Joshua Cannon & Associates, Inc.

The ranked sales show a narrow adjusted price range of \$70.56–\$80.94 per square foot. The midpoint is \$73.24 and the average is \$73.88. After adjustment, all of the sales are considered to be legitimate indicators of the subject value, and the spread is attributed to the normal trading price range for commercial real estate. A final adjustment unique to the subject property is the emergency generator and transfer switch, which were installed new in 2007 at a cost of \$140,000 (\$6.14 per square foot of building area). These improvements are not common to local office buildings, but are marketable to a segment of buyers. They are not sufficiently common to estimate their contributory value using local building sales. The generator and transfer switch were sold and installed by Enterprise Electrical Services, Inc. and David Stewart of that company reports the generator and switch have a salvage value of approximately 20% of replacement cost, or  $\pm$ \$28,000. This amount is also consistent with my online research of websites that market used back-up generators. This would be their minimum contributory value to the subject, and the probable value is slightly higher.

No one sale merits greater emphasis, and the midpoint/average indicators are considered to provide the best support of the most probable selling price.

In conclusion, a value estimate slightly above the midpoint/average is best supported. The specific estimate of value is \$75.00 per square foot. The total estimate of market value by the Sales Comparison Approach is calculated below.

| Building Area in Gross Square Feet           | 22,815      |
|--|-------------|
| Estimated Market Value per Square Foot       | \$75.00     |
| Indicated Value by Sales Comparison Approach | \$1,711,125 |
| Rounded                                      | \$1,710,000 |

# **Income Approach**

The premise of the Income Approach is that an informed buyer of an income-producing property will pay no more for the property than its ability to generate net income relative to conventional investment criteria. The Income Approach is a valuation method that estimates the amount of net income and then converts that estimate into a capital value. The following sub-sections identify the individual elements of the Income Approach.

## Market Rent Analysis

The subject property is designed for office use and it can support alternative uses, such as a retail/office, church or school. The office market has been contracting in recent years and most leases of larger spaces similar to the subject have been for some type of alternative use. These types of uses can benefit from the subject's arterial frontage and high parking volume, and would likely pay a higher rental rate versus a conventional office tenant.

The following chart contains rental information on six properties. The focus of the research was rented freestanding commercial buildings similar to the subject in location and physical characteristics. Photographs and a location map for the properties are in the *Appendix*.

| Comparable | Rental | Summary | Chart |

The rentals provide a range of \$7.00-\$12.00 per square foot and following is an analysis of the data.

Rental 1 at \$7.00/SF: This is a recent lease of an anchor shopping center space that was previously occupied by a furniture store. It is a good quality center, but the location is recessed on Carlisle Boulevard, which is under performing the market in the retail sector. The tenant is Teacher Heaven, which markets supplies to the educators. The subject could support a similar use and is a superior property.

- Rental 2 at \$8.50/SF: This is a 21,680-square-foot building on San Mateo Boulevard that was originally constructed as an auto dealership. It was subsequently used for retail and a gym; the most recent user is a church and their lease is a three-year sublease from the gym. This building has superior visibility on San Mateo Boulevard, but the subject has a greater level of interior finishes. The subject could also support a church use. Overall, this is a reasonable indicator of market rent.
- Rental 3 at \$9.00/SF: This is the anchor space in Eldorado Shopping Center at the corner of Montgomery Boulevard and Juan Tabo Boulevard. It was formerly occupied by Page One Books and now improved as a health club. The subject is a potential candidate for health club use, although it would require significant renovation. The subject location and marketability are rated inferior.
- Rental 4 at \$9.50/SF: This is a call center building on Jefferson Boulevard that was recently leased to Lowe's Home Improvement. AOL and Convergys previously used it as a call center. This building is rated superior to the subject in location and quality.
- Rental 5 at \$12.00/SF: The is an anchor space in the Fiesta del Norte Shopping Center at the corner of San Mateo Boulevard and Osuna Road. The two-story, 15,040-square-foot building was originally constructed as a restaurant and later converted to a private school (New Horizon's Computer Learning Center). In 2011 it was leased to the Great Academy Charter School at \$12.00 per square foot. Charter school spaces have higher rents because the building design and finishes must meet institutional building codes. The leasing agent for this space was Helen Strader of Diversified Nationwide Real Estate. Ms. Strader reports the landlord spent approximately \$15 per square foot in tenant improvements for Great Academy and this amount was lowered because of the existing school improvements. She estimates a school conversion from general office space would cost approximately \$30 per square foot. A \$30-per-square-foot tenant improvement amortized over 10 years at 9.0% increases the rent by \$4.67 per square foot. This cost explains the higher rental rate for this space.
- Rental 6 at \$9.96/SF: This is a listing of a vacant building that is reasonably similar to the subject in quality of location and construction. The building was constructed as an office building and later converted to a marketing center for home improvement and renovation products (Direct Buy). This is a listing and not a closed lease, and the indicated subject market rent is lower.

The preceding data support a market rent estimate for the subject of approximately \$8.75 per square foot of building area, or a total annual rent of \$199,631.

### Vacancy and Credit Loss

The subject property is designed for single tenant use and will likely be 100% occupied or 100% vacant. The office vacancy rate in the entire metro area is 21.2%, and the rate for the Northeast Heights is 19.6%. These rates will likely trend down as the economy improves and do not reflect long-term vacancy over a typical investment holding period. The subject is well located and its vacancy risk is obviously tied to pricing, but its listing history shows that securing a user for this building is not easily accomplished. Given all of the factors, a stabilized vacancy rate of 12.0% is applied.

#### **Operating Expenses**

The subject building is assumed to be rented on a triple net basis with all operating expenses passed through to the tenant. A management fee of 3.0% is deducted.

Replacement Reserves allow for the replacement of short-lived components of the improvements, such as roof covers, exterior wall surfaces, paving, plumbing fixtures, and HVAC equipment. For the purpose of

the appraisal, an estimate is made of the funds necessary to replace these items over a holding period. A common charge for Replacement Reserves is 1% to 3% of effective gross income. The sales used in deriving an overall capitalization rate were analyzed without reserves for replacement, and for consistency, it has not been included in this approach.

### Net Operating Income Estimate

The preceding information is used to develop the following projection of stabilized net operating income for the subject property.

|                                       | Totals          | Per SF        |

# Estimate of Year One Net Operating Income

# Direct Capitalization

Ideally an overall rate is developed by analysis of recent transactions in the market involving relatively similar properties. The following chart provides a summary of overall rates extracted from recent sales of investment properties in the Albuquerque metro area. The sales include a mix of retail, office and industrial buildings. The overall rates extracted from office (or predominantly office) buildings are highlighted in bold.

Built in the 1970s.</li> <li>Single tenant sale/leaseback to regional tenant on 7-<br/>year lease with no escalations. Rent is above market.<br/>33-yr-old bldg.</li> <li>Suburban arterial 1,860 SF property leased to Allstate<br/>Corporate as a claims center. High rental rate of<br/>\$25.64/SF triple net increased investment risk.</li> <li>Single tenant industrial with five-year triple net lease.</li> </ul> |

The preceding data provides a range of 7.00%-10.48%, and there is a logical progression based upon the perceived income risk, duration and pattern. Retail and restaurant buildings under long-term triple net leases are clearly the preferred investment and these have the lowest rates. Conversely, non-retail single-tenant buildings with above-market rents represent the high end of the range. The income stream at these properties could be difficult to replace if the tenant vacates (and possibly at lease renewal) and overall rates are logically higher. The eleven office buildings in the data set have a cap rate range of 8.32%-9.41%, with an average of 8.72% and a midpoint of 8.74%. The subject is an older office building with a higher risk level and an overall rate of 9.00\% is supported.

### Lease-Up Expenses

The subject property is 100% vacant and an investment buyer would incur expenses to lease up the property. The subject is assumed to have a five-year lease and it is typical in a new lease for the landlord to provide new carpet, paint and some minor partitioning. The landlord's tenant improvements expense is estimated at \$5.00 per square foot. The leasing commission is estimated at 6.0% and the lease-up period is estimated at six months.

## Conclusion of Income Approach

The Income Approach combines the estimates in the preceding sub-sections as follows to estimate the market value of the subject property.

| Estimate of Stabilized Net Operating Income     | \$170,405         |
|---|-------------------|
| Overall Capitalization Rate                     | <u>9.00%</u>      |
| Estimated Value at Stabilized Occupancy         | \$1,893,389       |
| Less Landlord Tenant Improvements at \$5.00/SF  | -\$114,075        |
| Less Leasing Commission at 6.0%                 | -\$58,178         |
| Less Lost Rent During Six-Month Lease-Up        | <u>-\$100,386</u> |
| Estimate of Market Value by the Income Approach | \$1,620,750       |
| Rounded   | \$1,620,000       |

# Reconciliation

The indicated real property values from the preceding analysis are follows.

| Cost Approach             | \$2,620,000 |
|---------------------------|-------------|
| Sales Comparison Approach | \$1,710,000 |
| Income Approach           | \$1,620,000 |

The Cost Approach is significantly higher than the other approaches; however, no deduction was made in the analysis for functional and economic obsolescence. The subject property suffers from both forms of obsolescence and this creates the large spread in the value estimates. The Cost Approach is given no emphasis in the final estimate of value.

The lowest value indication is from the Income Approach and this is consistent with current market conditions. The recession has caused a decrease in rents and occupancy rates, plus obtaining financing for investment buildings is difficult. This has depressed the value of investment office buildings. Low interest rates have improved the economics of owning versus renting, and this works to increase the spread in values between owner-occupied and investment buildings. An investor is not the most probable buyer and the value indication by the Income Approach is considered to be less than the achievable value.

The Sales Comparison Approach contains current sales of buildings that are similar to the subject property and this is clearly the best supported approach. It is given the greatest weight in the final value estimate.

Finally, the subject property is under contract to be purchased for \$1,653,000. This price was negotiated in mid-2012, or more than a year prior to this appraisal and market conditions have improved slightly during this period. This is consistent with the market data in the appraisal.

Based upon the preceding data and analysis, the final estimate of market value is \$1,710,000.

## Marketing/Exposure Time

Based upon the included sale data and my interviews with the market participants for the subject property type, a reasonable marketing period expectation for this property is estimated to be six to nine months, assuming competent marketing at a price consistent with the appraised value.

## Certification

This certifies that the estimated market value of the subject property, as of September 13, 2013, is One Million Seven Hundred and Ten Thousand Dollars (\$1,710,000).

I certify that, to the best of my knowledge and belief:

- The statements of fact contained in this report are true and correct.
- The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions and are my personal, impartial, and unbiased professional analyses, opinions and conclusions.
- I have no present or prospective interest in the property that is the subject of this report, and I have no personal interest with respect to the parties involved.
- I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.
- My engagement in this assignment was not contingent upon developing or reporting predetermined results.
- My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.
- My analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the *Uniform Standards of Professional Practice*.
- This appraisal assignment was not based on a requested minimum valuation, a specific valuation, or approval of a loan.
- I have made a personal inspection of the property that is the subject of this report.
- No one provided significant real property appraisal assistance to the person signing this certification.
- I have provided appraisal services involving the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment.
- The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics & Standards of Professional Practice of the Appraisal Institute, which include the Uniform Standards of Professional Appraisal Practice.
- The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives.
- As of the date of this report, I have completed the continuing education program of the Appraisal Institute.
- Joshua Cannon is a General Certified Real Estate Appraiser, State of New Mexico, Certificate No. 000021-G.

This opportunity to provide appraisal services to your organization is appreciated, and questions from authorized users of the report will be welcomed if any aspect of the research or analysis requires clarification.

Rental Information

### Comments

This is a visible building on Menaul Bouelvard, east of Wyoming Boulevard. It has a non-signalized corner location at Ambassador Road and there is parking in the front and rear. The buyer (Frank Venaglia) purchased the property as an investment and has an asking lease rate of \$10.00 per SF, triple net. Mr. Venaglia reports this asking rate is negotiable.

### **Comments**

This is a good quality office building that was formerly 87.31% leased to First State Bank. It has a recessed location in Journal Center near other good quality buildings. It was previously purchased in October 2004 as a 100% leased property for \$4,600,000.

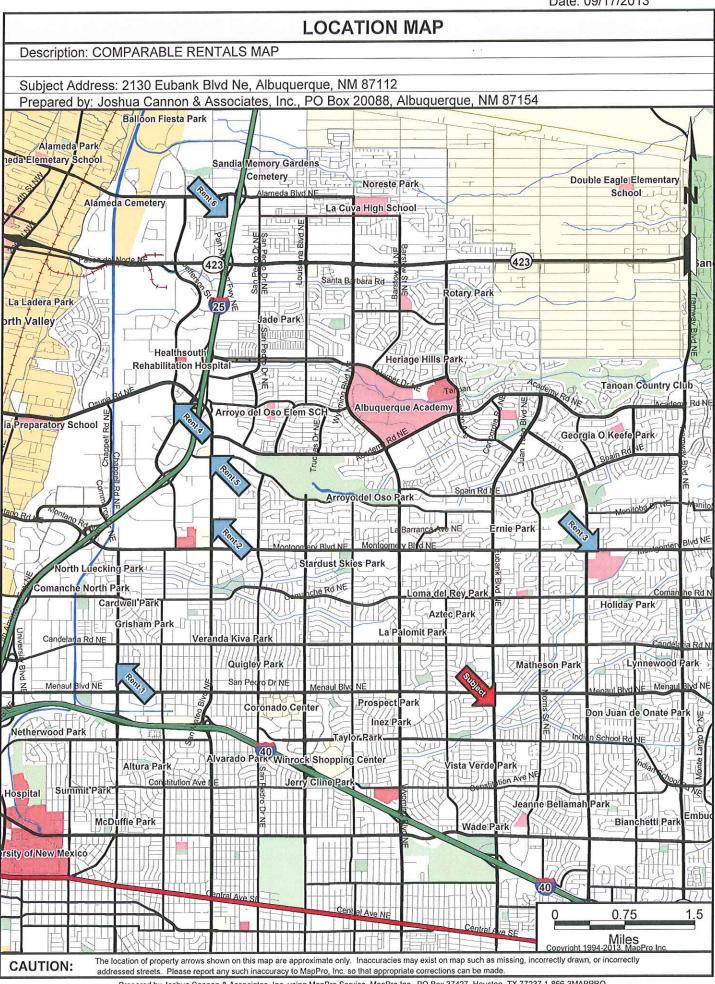

The buyer will occupy  $\pm 67\%$  of the building with their software company - Ultramain Systems - and they plan to spend \$500,000 on refit. The balance of the building will be offered for lease.

The property was listed for sale at \$3,300,000 and placed under contract at \$2,700,000 in May 2012.
